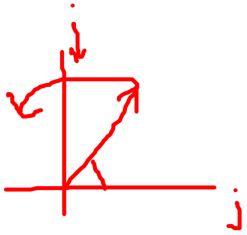
Fourier Transform

Approximate **non-periodic signals** with complex sinusoids

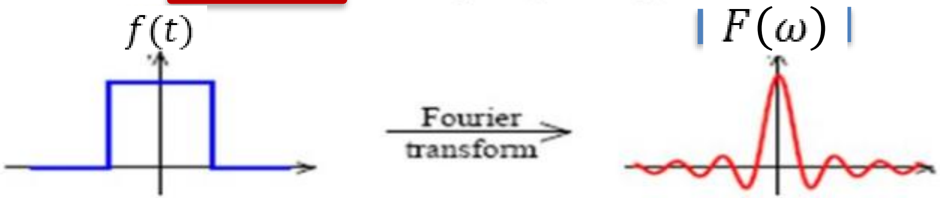
Definition: Fourier Transform

- the Fourier Transform of a function $f(t)$ is defined by:

$$F(\omega) = \int_{-\infty}^{\infty} f(t) e^{-i\omega t} dt$$



- The result is a function of ω (frequency).



Fourier Transform and Inverse Fourier Transform

- Fourier Transform

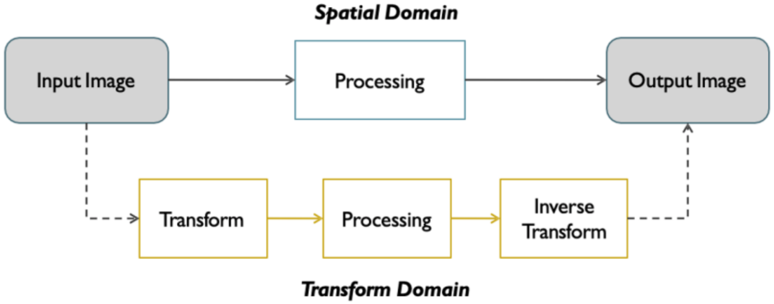
$$F(\omega) = \int_{-\infty}^{\infty} f(t) e^{-i\omega t} dt$$

$$F(\omega) = \mathcal{F}[f(t)]$$

- Inverse Fourier Transform

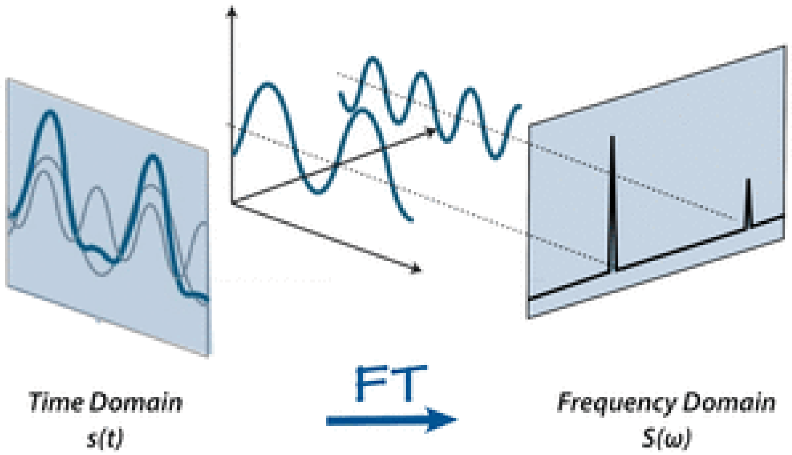
$$f(t) = \int_{\omega=-\infty}^{\omega=\infty} \frac{1}{2\pi} F(\omega) e^{i\omega t} d\omega$$

$$f(t) = \mathcal{F}^{-1}[F(\omega)]$$



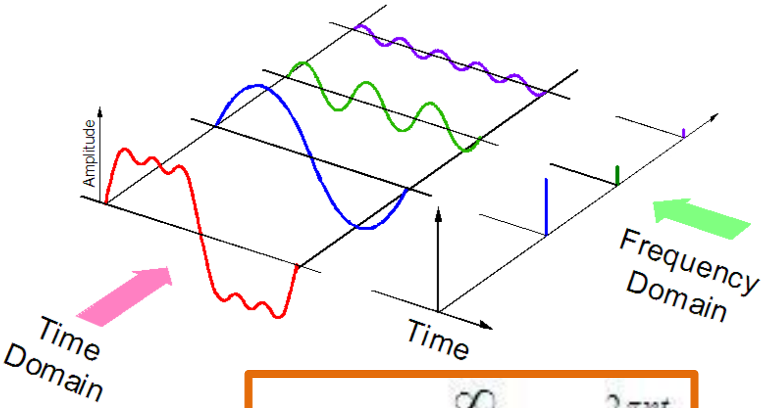
Fourier Transform vs Series

Fourier Transform



$$F(\omega) = \int_{-\infty}^{\infty} f(t) e^{-i\omega t} dt$$

Fourier Series (periodic only)



$$g(t) = \sum_{n=-\infty}^{\infty} c_n e^{i\frac{2\pi nt}{T}}$$

$$c_n = \frac{1}{T}\int_0^T f(t) e^{-i\frac{2\pi nt}{T}} dt$$
